

Case Study:- Bicycle Storage Shelter

Interclamp®

Interclamp fittings are ideal for the construction of both permanent and temporary shelters. In this installation a bicycle storage shelter has been constructed using a small range of fittings. The customer decided to use Interclamps for the above proto-type because of their ease of assembly and durable galvanised finish. The customer has since carried out several other projects using Interclamps including smoking shelters, bus stops, a car port & an outdoor shower block.
