

Case Study :- Civic Amenity Site

Interclamp®
The right connection

Architects and designers chose to use Interclamps for this new civic amenity recycling site. Interclamps solved the problems the designers had of creating the complex angled structures that they required. The ability of creating complex handrails with the turn of a hexagon key and by cutting tube to length clearly offered the most beneficial option when compared to traditional welded structures. The ease at which it was installed on-site made Interclamp once again the right choice.
